

The effective combination of knowledge and technology in Metrix Metal

Asprova APS and improving the corporate culture

A reduction of the whole production process.

A **30% reduction of waiting time** for finished goods due to a smooth flow of semi-finished products.

A better copy of the whole production process, including any connections between the operations, the availability of particular employees or limitations present during the process.

Reducing the number of mistakes and increasing customer trust by eliminating manual planning with the use of MS Excel, **automating material balancing and synchronising the purchase plan** with the created schedule. **Increase of the stability in the whole process** due to the precise copy of limitations present therein.

Standardising the whole production process, verifying the technological data, quickening the detection of shortages and improving the company's corporate culture.

Improving the results while keeping the same amount of resources.

Why eq system and Asprova APS?

Tomasz Konkul
Production Manager

METRIX METAL

*Our production process was becoming more and more complicated and the tools we have been using were not able to copy it precisely. Any change to the plan involved numerous difficulties and a huge amount of work. That is why, we decided to change it and invest, not only in a suitable tool, but also in right specialists. The collaboration with EQ System went far beyond the implementation of Asprova APS. It covered much more and thus, **mobilised us not only to make organisational changes but also to take special care of the process of relaying knowledge to anybody.***

Now, we can be sure that the plan is realised smoothly regardless of which shift and employees are responsible for it. Asprova APS makes it possible for us to plan the optimum staff for realising the production plan and, by the same token, establish the number of machines needed. Before Asprova APS we only knew "how much to produce". Now we know: how much and when.

I can recommend EQ System to those who not only look for the implementation services but also would like to receive solid support in the development of their production management.
